the fundamental solutions f_s satisfy the governing equations in a solution domain s and then the numerical solutions can be found from the exterior and the interior boundary conditions on s the resource nodes of f_s are chosen outside s distinctly from the case of the boundary element method bem this method is called the method of fundamental solutions mfs which originated from kupradze in 1963 the laplace and the helmholtz equations are studied in detail and biharmonic equations and the cauchy navier equation of linear elastostatics are also discussed moreover better choices of source nodes are explored the simplicity of numerical algorithms and high accuracy of numerical solutions are two remarkable advantages of the mfs however the ill

conditioning of the mfs is notorious and the condition number cond grows exponentially via the number of the unknowns used in this book the numerical algorithms are introduced and their characteristics are addressed the main efforts are made to establish the theoretical analysis in errors and stability the strict analysis as well as choices of source nodes in this book has provided the solid theoretical basis of the mfs to grant it to become an effective and competent numerical method for partial differential equations pde based on some of our works published as journal papers this book presents essential and important elements of the mfs it is intended for researchers graduated students university students computational experts mathematicians and engineers
